Experience

Aug 2023 -
Current

Black-end Developer

Entronica Co., Ltd. | Outsource AIS

I have been working in backend development for AIS, where I have been involved in developing various projects using a range of technologies such as Golang, Java, JavaScript, and Bash Script. Additionally, I have utilized Kafka and MongoDB and had the opportunity to work with real servers.

- I have optimized data transmission to reduce the volume of data exchanged, enhancing performance and reducing resource usage while maintaining system functionality, thereby lowering operational costs.
- I have managed MongoDB indexing to improve the speed of interactions with MongoDB, reducing processing times.
- I have written scripts to merge large data files, such as logs, backup files, and customer transactions, to reduce their size while preserving important details. This has resulted in lower storage requirements and reduced costs associated with data storage.
- I have updated and refactored old code according to new requirements, which has honed my skills in reading and troubleshooting code and implementing improvements effectively.
- I have effectively used AI tools like ChatGPT and Claude, which has significantly accelerated my learning and reduced working time.

Apr 2023 -
Aug 2023

Front-end Developer

tansamai group co. ltd

I worked on a project as a Front-end Developer for a POS system for a client company specializing in Vespa accessories. In this role, I focused on designing and implementing the user interface, ensuring an intuitive and efficient experience for the end users.

Oct 2022 -
Feb 2023

Front-end Developer

Senior Project of Naresuan university

I worked on a project with the Department of Medical Sciences, where I was assigned the role of Front-end Developer. I collaborated with my teammates using GitLab and utilized the Axios API to facilitate communication with the server.

Mar 2022 -
Jun 2022

Front-end intern

BiggestFan Productions Co.,Ltd

I developed website pages using React, Tailwind CSS, and JavaScript. I collaborated with teammates using Git for version control and read documentation related to the technology stack to ensure effective implementation. Additionally, I worked on web3 projects involving blockchain and cryptocurrency, including tasks related to smart contracts on the Ethereum.
